

With the Meridian **DSP7200**,
Cat 5 is as good as gold

MERIDIAN

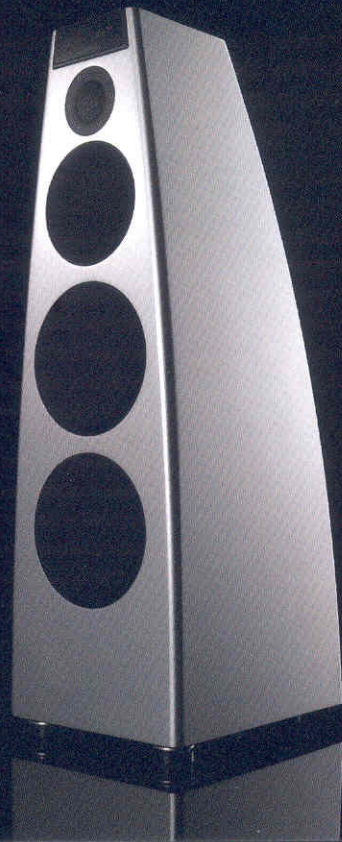

Why use gold when you can use CAT 5?

Dear

In the past, you've probably felt that you had to invest in thick, unsightly cables to get the best from your hi-fi. And for the very best results those cables have probably used gold or other exotic materials, which are not exactly kind to your wallet.

But not any more. We would like to introduce you to the new Meridian DSP7200 Digital Active Loudspeaker, which features Meridian's innovative SpeakerLink technology. Inside the DSP7200, powerful digital signal processing, converters, power amplifiers and loudspeaker drivers are all housed side-by-side in the same cabinet for the most exquisite sound imaginable. And thanks to SpeakerLink, all you need is a slender and inexpensive Cat 5 cable to carry the digital signal directly from a Meridian preamplifier, CD player, DVD player or AV system controller to the loudspeaker.

RJ45 connectors make connection simple and the same Cat 5 cable carries the communications and control signals, plus of course balanced digital audio for simply impeccable sound. The result: a smooth, sweet, natural sound – and unparalleled listening enjoyment. So in this application, Cat 5 is as good as gold.

Experience the **DSP7200** at your nearest Meridian Premium Partner

To experience the DSP7200, and Meridian's other award-winning systems, please visit our web site to locate your nearest premium partner www.meridian-audio.com: alternatively, to make a private appointment please call 01480 445678.

Free extended warranty*

If you purchase any item from the Meridian range before 28th February 2009, we will give you additional peace of mind by extending the guarantee by two years – so, for example, a pair of DSP7200 loudspeakers that would normally have a three year warranty will be protected for five years from the date of purchase.

Yours sincerely,

Graeme Taylor
Marketing Director
Meridian Audio Ltd
