

The natural extension to your iPod.

The Meridian iRIS features an easy-to-use set of buttons on the top of the unit, which work with a clear, elegant on-screen display that allows almost instant setup for your HD system.

Easy buttons

A source selector button switches between the iPod and external HDMI and S-Video inputs (ideal for example, for connecting a Meridian F80). An aspect ratio/format button lets you match the content to the display. There's a volume control, and a button that connects the iPod to your computer via USB.

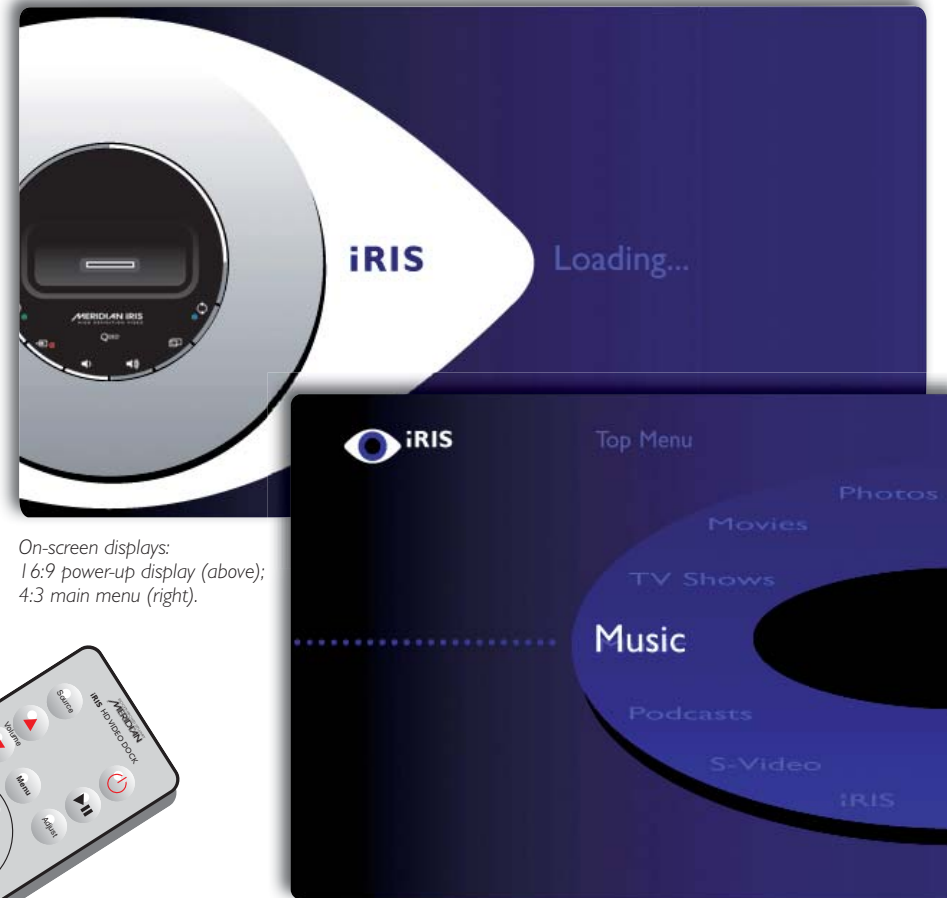

Handy remote

In addition, a compact infrared remote controls both the iRIS and the iPod, so you can select the material you want without leaving your chair. Your iPod content is accessed via on-screen menus that work in the same way you're used to on the iPod.

Intuitive on-screen display

The on-screen display mirrors the operation of your iPod for simple, intuitive access to your music, images, TV shows and movies. Within minutes of plugging in, you'll be familiar with the Meridian iRIS.

The Meridian iRIS with Universal Dock for iPod – it's the ultimate accessory for your HD display (and your iPod)!

On-screen displays:
16:9 power-up display (above);
4:3 main menu (right).

STUNNING HDTV
FROM YOUR IPOD

Superb Hi-Def from your iPod®.

Stunning Hi-Def from your iPod®

The video iPod® is a convenient way to watch movies on the go. But it was never designed to drive a high-definition TV or flat-panel display. Now, a great new product from Meridian® – world leaders in digital audio and video – changes all that. You can enjoy a true Hi-Def picture from your iPod – with the latest hi-tech accessory for your Hi-Def TV: the Meridian iRIS with Universal Dock for iPod.

The iPod challenge

Video content looks great on an iPod screen, but connect it to your HD device and the display's scaling circuitry, designed to convert non-HD images, combines with the iPod's own processing to produce a picture that's often difficult to watch and full of 'jaggy' artifacts.

Hi-Def from your iPod

The Meridian iRIS with Universal Dock for iPod changes all that. Using sophisticated and unique Qdeo™ video processing by Marvell, the Meridian iRIS dramatically improves iPod video and upscales it to full HD 1080p to suit your display perfectly – via HDMI or analogue component. And because the Meridian iRIS outputs true Hi-Def, your display's own processing doesn't get in the way. The result: a pristine, impressive on-screen image – with the sound to match!

On-screen display

The Meridian iRIS features a simple set of control buttons and a small remote which, with the intuitive on-screen-display, let you control both Meridian iRIS and iPod.

Additional inputs

External HDMI and S-Video inputs allow you to easily connect the Meridian iRIS to other devices.

Inside the Meridian iRIS.

The Meridian iRIS features revolutionary Qdeo™ video processing by Marvell. This powerful chipset with its unique, proprietary suite of QuietVideo processing technologies does the seemingly impossible – delivering a Hi-Def picture that looks so impressive, you need to see it to believe it!

The Meridian iRIS is designed for direct connection to an HD display and delivers a consistent, high-quality viewing experience – with a dramatic improvement in perceived video quality.

Cool sounds for cool images

And because Meridian is an audio company too, we help deliver the best possible sound from your iPod to complement the great pictures. Differential noise cancelling circuitry along with direct DC coupling from the source is used in the audio path to get the best possible results. A complete set of audio outputs is provided including coax and optical S/PDIF digital at 48kHz, 24-bit sampling, suitable for any modern hi-fi or home theatre system. In addition there are variable analogue headphone and line-level outputs.
