Meridian HD621 HDMI Audio Processor Gets 3D Update with All-New Firmware

Meridian Audio has announced that it is making 3D capable firmware available for its HD621 HDMI Audio Processor.

The HD621 is the vital link between a Meridian system and the latest sources that use HDMI. HD621 separates HDMI audio and video, usually carried via the same cable, delivering pristine audio to a Meridian system. Meanwhile the video content is fed direct to the display via a single cable, eliminating additional switching.

Now, with brand new firmware, HD621 adds support for 3D video formats to its already impressive feature set, ensuring the HDMI Audio Processor remains the vital link in all surround-sound and A/V projects.

HD621 also performs up- and down-sampling of digital audio to ensure the very best sound from today's varied sources. It also includes Meridian's highest-performance FIFO buffering technology to remove jitter and deliver a significant improvement in sound quality from all HDMI sources.

The 3D capable firmware is already being installed in all new production HD621 HDMI Audio Processors, and is now available to all Meridian retailers and installers who can update products already installed in customers' homes and systems, bringing 3D support to their Meridian Digital Theatres and surround systems.

About Meridian Audio

Meridian is based near Cambridge, UK, and was founded in 1977 by Bob Stuart and Allen Boothroyd. With over 30 years' history of innovation and development of uncompromised consumer home entertainment systems offering exceptional performance, this award-winning company is widely recognized as a world leader in high-quality audio and video reproduction. Meridian developed the first audiophile CD player, the world's first consumer digital surround controller, and the MLP lossless packing system included in Blu-ray Disc. The company's optical disc players, DSP-based loudspeakers, video projectors, and scalars are unique in the industry, maintaining a super-quality digital signal throughout the path from the studio to the home, using advanced digital signal processing to deliver both a sweet, natural sound and smooth, crystal-sharp images with true cinematic realism. In late 2008, Meridian acquired leading networked media server developer Sooloos, and today the Meridian Sooloos Digital Media System offers a unique combination of superb digital audio quality with the world's most innovative, flexible and intuitive touchscreen-based home entertainment system.
